HOUSE WIRING

These days we plan a house layout making sure we have enough taps, door handles and power points, but don't generally allow for services such as networking, telecommunications, free to air TV and pay TV which are all common place in this day and age.

Under Foxtel's guiding direction, Ultracomm are offering the design and pre-wiring of new buildings to allow for any services which you will probably want now or in the very near future.

Things you should consider are:

- Pay TV (Satellite or Cable)
- Telecommunications
- Networking
- Alarm
- Security
- Audio/Visual
- Free to air Antennas
- Automation

Foxtel have now come up with a minimum standard for cabling on premises, especially new homes.

Foxtel are working closely with Optus and Austar to standardise and streamline to enable wiring and pre-wiring

If you are considering building or employing a builder, make sure you talk to me before pen has been put to paper.
